

IT Access and Change Request: Process Guidelines

Timeless Software Pvt. Ltd.

SYNTHETIC DEMO DATA. This document describes a fictional company (Timeless Software Pvt. Ltd.) created for the OrgPilot AI hackathon demo. All people, figures and policies are invented.

Field	Detail
Document ID	PRC-001
Version	1.0
Effective date	1 January 2026
Process owner	Service Desk, Customer Support (head: Rudra Rao (EMP0004))
Related documents	OPS-001 Operating Policy; ORG-001 Organization Overview

1. Purpose and scope

These guidelines describe how every IT access and change request is handled from submission to closure. Each request is given a case ID in the format REQ-0001. The process applies to all employees and all departments.

2. Teams and responsibilities

Team	Department	Responsibility
Requester	Any department	Submits the request with a business reason
Service Desk	Customer Support (SUP)	Triage, team assignment and closure of the request
Engineering Manager	Engineering (ENG)	Approves or rejects the request
Security Team	Security (SEC)	Carries out the mandatory security review
Dev Team	Engineering (ENG)	Implements the approved and security-cleared change
QA Team	Quality Assurance (QA)	Verifies that the change works and is correct

3. Standard process steps

Each step is recorded in the request log when it is completed. The target time is the maximum elapsed time since the previous step was recorded. Targets apply to each step separately and are not added together.

#	Activity	Responsible team	What happens	Target time
1	Request Submitted	Requester	The request and business reason are submitted to the Service Desk.	Start of the process
2	Triage	Service Desk	The request is checked for completeness and classified.	4 hours after submission
3	Assigned to Team	Service Desk	The request is assigned to the right team and to the Engineering Manager.	4 hours after triage

#	Activity	Responsible team	What happens	Target time
4	Manager Approval	Engineering Manager	The Engineering Manager approves or rejects the request.	24 hours after assignment
5	Security Review	Security Team	The Security Team reviews the approved request. Mandatory.	24 hours after approval
6	Implementation	Dev Team	The change is implemented.	12 hours after security review
7	QA Verification	QA Team	The change is tested and verified.	8 hours after implementation
8	Closed - Completed	Service Desk	The request is closed as completed.	4 hours after QA verification

A standard completed request involves six handoffs between teams: Requester to Service Desk, Service Desk to Engineering Manager, Engineering Manager to Security Team, Security Team to Dev Team, Dev Team to QA Team, and QA Team to Service Desk.

4. Alternative outcomes

Outcome	When it happens	Who records it	Target time
Closed - Rejected	The Engineering Manager rejects the request at Manager Approval.	Service Desk	2 hours after the decision
Closed - Cancelled (at triage)	The request is invalid, a duplicate, or withdrawn by the requester.	Service Desk	2 hours after triage
Closed - Cancelled (after security review)	Security does not clear the request, or the requester withdraws it.	Service Desk	2 hours after security review

5. Sequence rules

- The steps must happen in the order shown in section 3.
- Implementation must not start until both Manager Approval and Security Review have been recorded.
- Security Review must take place after Manager Approval, never before it and never after closure.
- A request must not be closed as completed until QA Verification has been recorded.
- Any request that breaks these rules is a process exception. The Service Desk reports it to the head of Engineering and to Security within one working day.

6. Escalation

If a step has not been recorded within twice its target time, the Service Desk escalates as follows:

Overdue step	Escalate to
Triage, Assigned to Team, Closed - Completed	Head of Customer Support: Rudra Rao (EMP0004)
Manager Approval, Implementation	Head of Engineering: Pooja Patil (EMP0001)
Security Review	Head of Security: Tara Joshi (EMP0101)
QA Verification	Head of Quality Assurance: Avni Iyer (EMP0002)

7. Process KPIs and targets

KPI	Definition	Target
Average cycle time	Mean time from Request Submitted to the final closing step, across all requests	3.0 days or less
Completion rate	Requests closed as Completed divided by all requests	85% or more
Manager Approval wait	Mean time from Assigned to Team to Manager Approval	24 hours or less
Out-of-sequence requests	Requests that break the sequence rules in section 5	0

8. Records

The request log holds one row per recorded step with four fields: case ID, activity, timestamp and resource (the responsible team). Service Desk is responsible for the completeness of the log. KPIs are calculated from the log with deterministic calculations and reviewed monthly by Operations.

9. Review of these guidelines

The Service Desk reviews these guidelines once a year. The next review is due on 1 January 2027.
